

## Practical 2

**AIM:** Write a python program to calculate simple interest.

**CODE :**

```
P = int(input("Enter Amount : "));  
R = float(input("Enter Rate of Interest : "));  
T = float(input("Enter Time : "));  
SI = (P*R*T)/100;  
print("Simple Interest",SI);
```

**OUTPUT :-**

```
Enter Amount : 10000  
Enter Rate of Interest : 10  
Enter Time : 1  
Simple Interest 1000.0
```
