

## Practical 5

**AIM:** Write a python program to demonstrate the use of Arithmetic operators by getting two numbers from the user.

**CODE :**

```
A = int(input("Enter A : "))  
B = int(input("Enter B : "))  
  
print("Addition is ", A+B)  
print("Subtraction is ", A-B)  
print("Multiplication is ", A*B)  
print("Division is ", A/B)  
print("Modulus is ", A%B)  
print("Floor Divison is ", A//B)  
print("Exponent is ", A**B)
```

**OUTPUT :-**

```
Enter A : 10
Enter B : 5
Addition is 15
Subtraction is 5
Multiplication is 50
Division is 2.0
Modulus is 0
Floor Divison is 2
Exponent is 100000
```
